

Smart community platform and mobile application

Build a community not only a smart city

interticket

Our solution.

The Smart Community platform we offer provides functions which **enables the interaction and communication between the community founder and members** with the help of a mobile application.

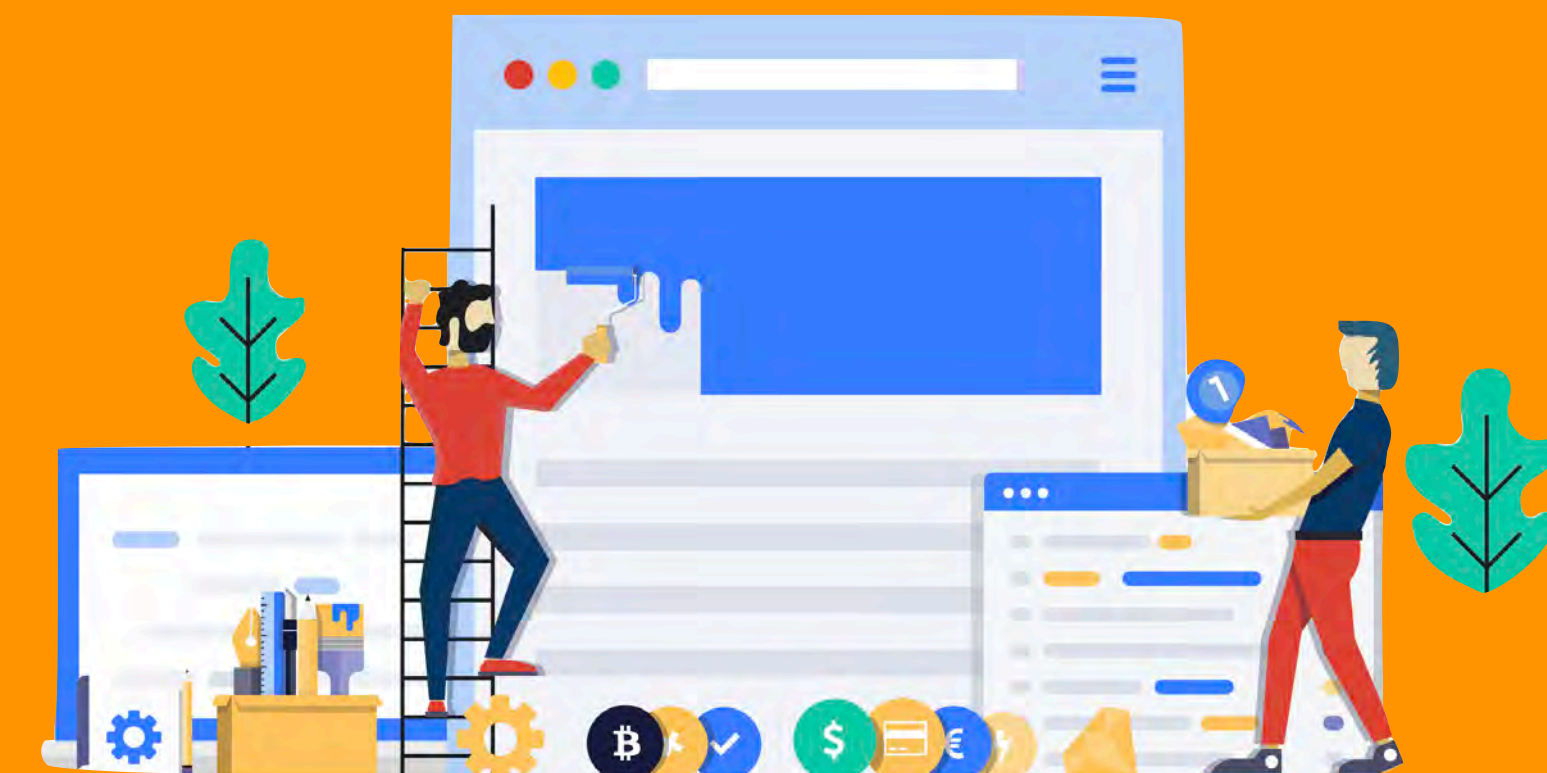

It creates transparency, visibility and also trust,
and in the meantime
**better overall feelings towards
your city/district.**

With our help...

Businesses can also share their offers to citizens, **so you enable and improve the local economy.**

An active and constantly interacting community will help you even **save money and support you on the next elections,** and not only act as a better community.

We are providing solutions to these issues.

Information

You can share all relevant information with the community members in a native and searchable way.

Communication

You can communicate with the members in an interactive way and even they can communicate among themselves with our integrated chat solution.

Financials

You can deliver financial solutions (i.e. own branded prepaid card), coupons, vouchers, support and donations within the app.

Mobility

Mobile parking, highway tickets and transportation tickets are available and also mobility providers can be linked in the app.

What do we provide?

Branded mobile application

Your application will be branded by your own guide book and with functions you want.

Administration portal

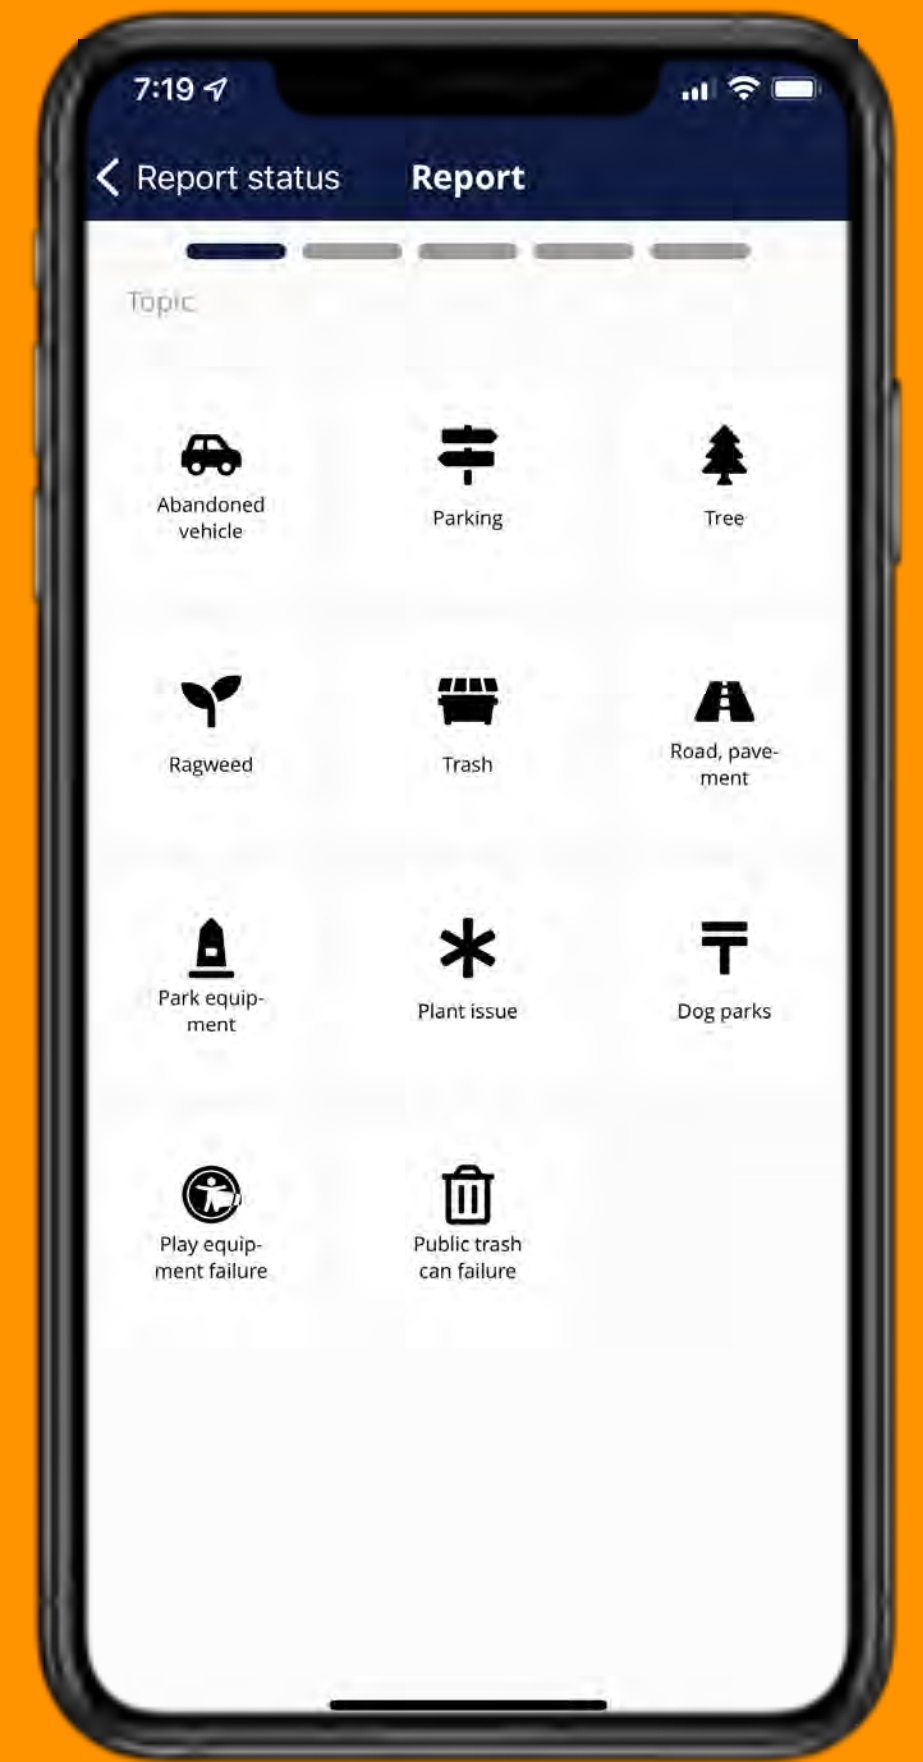

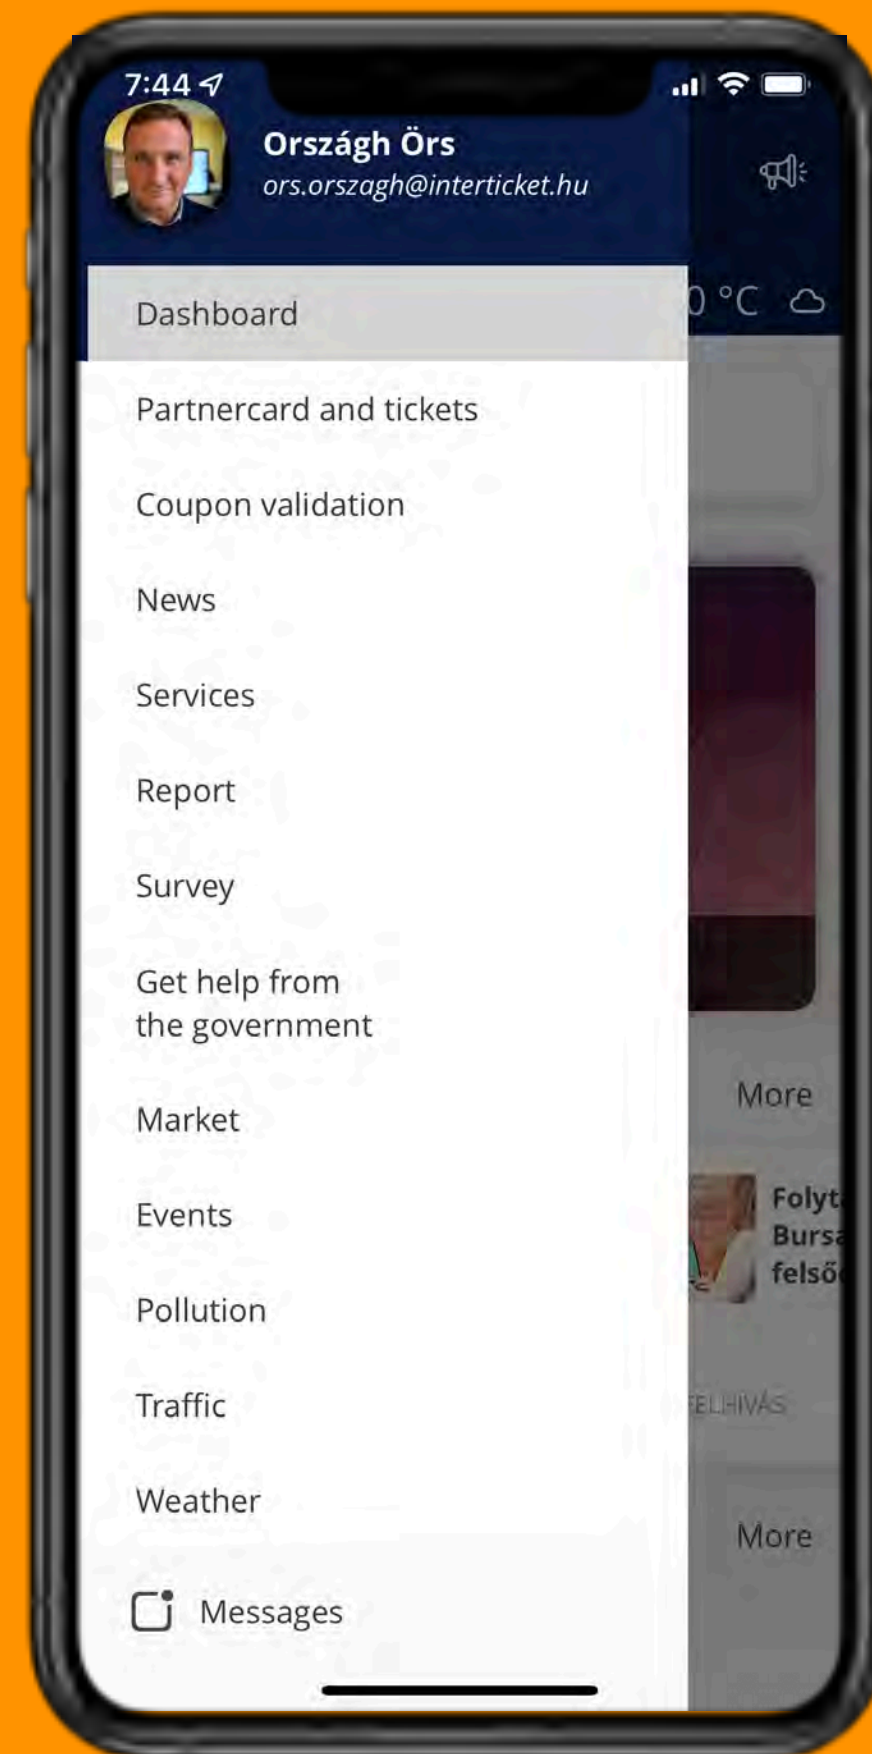

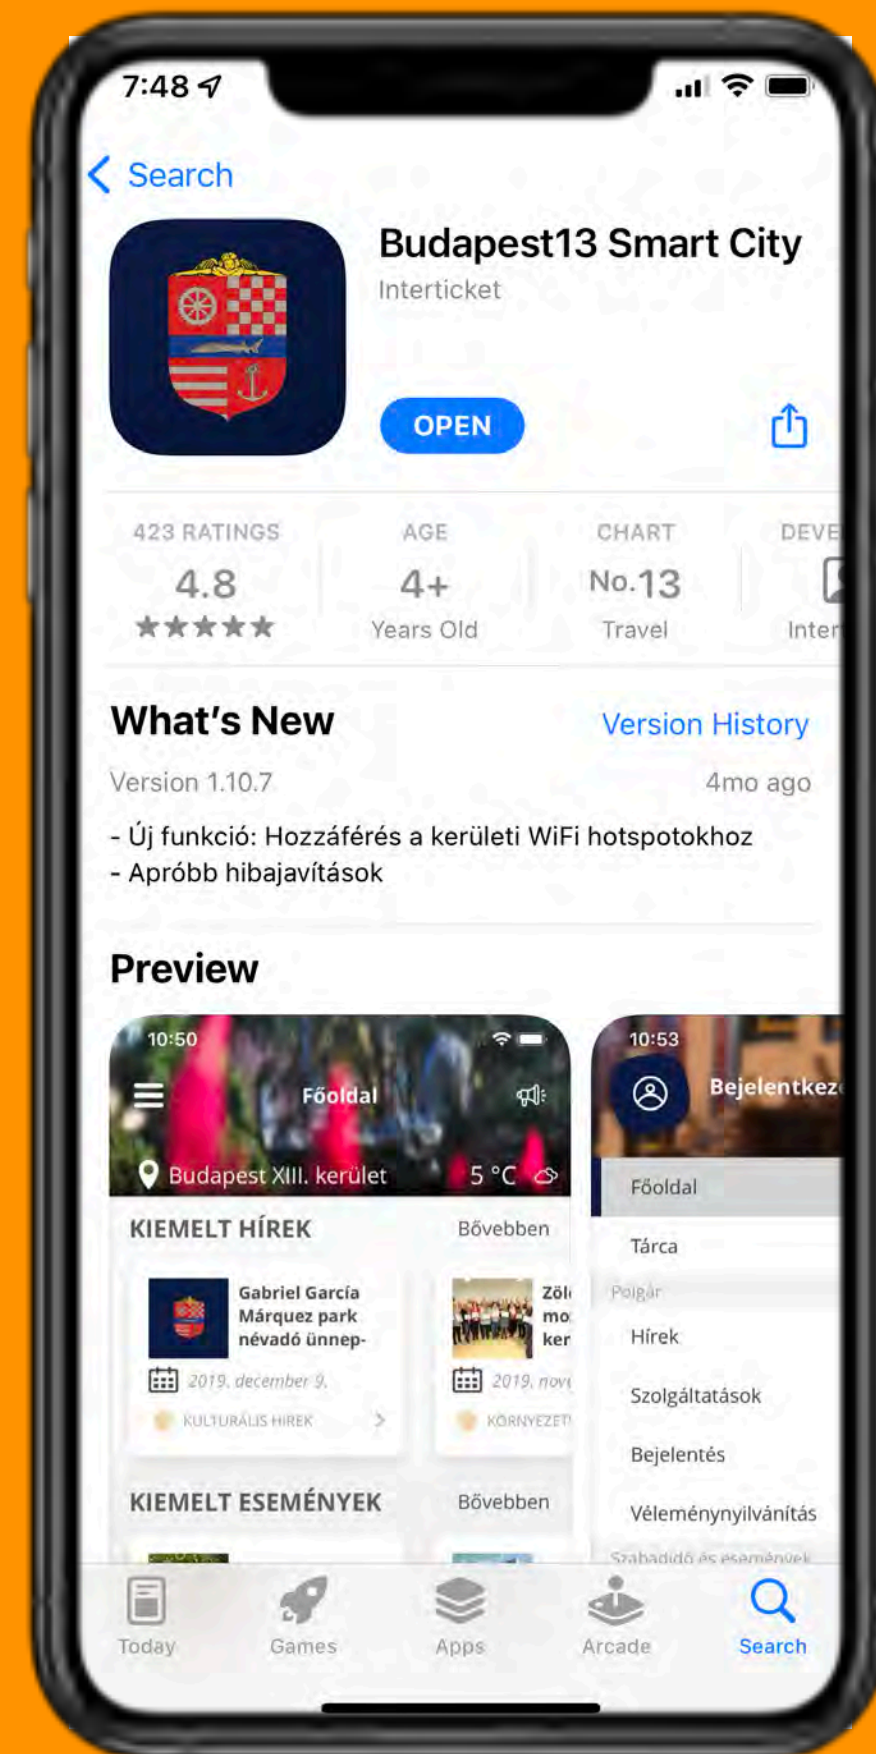

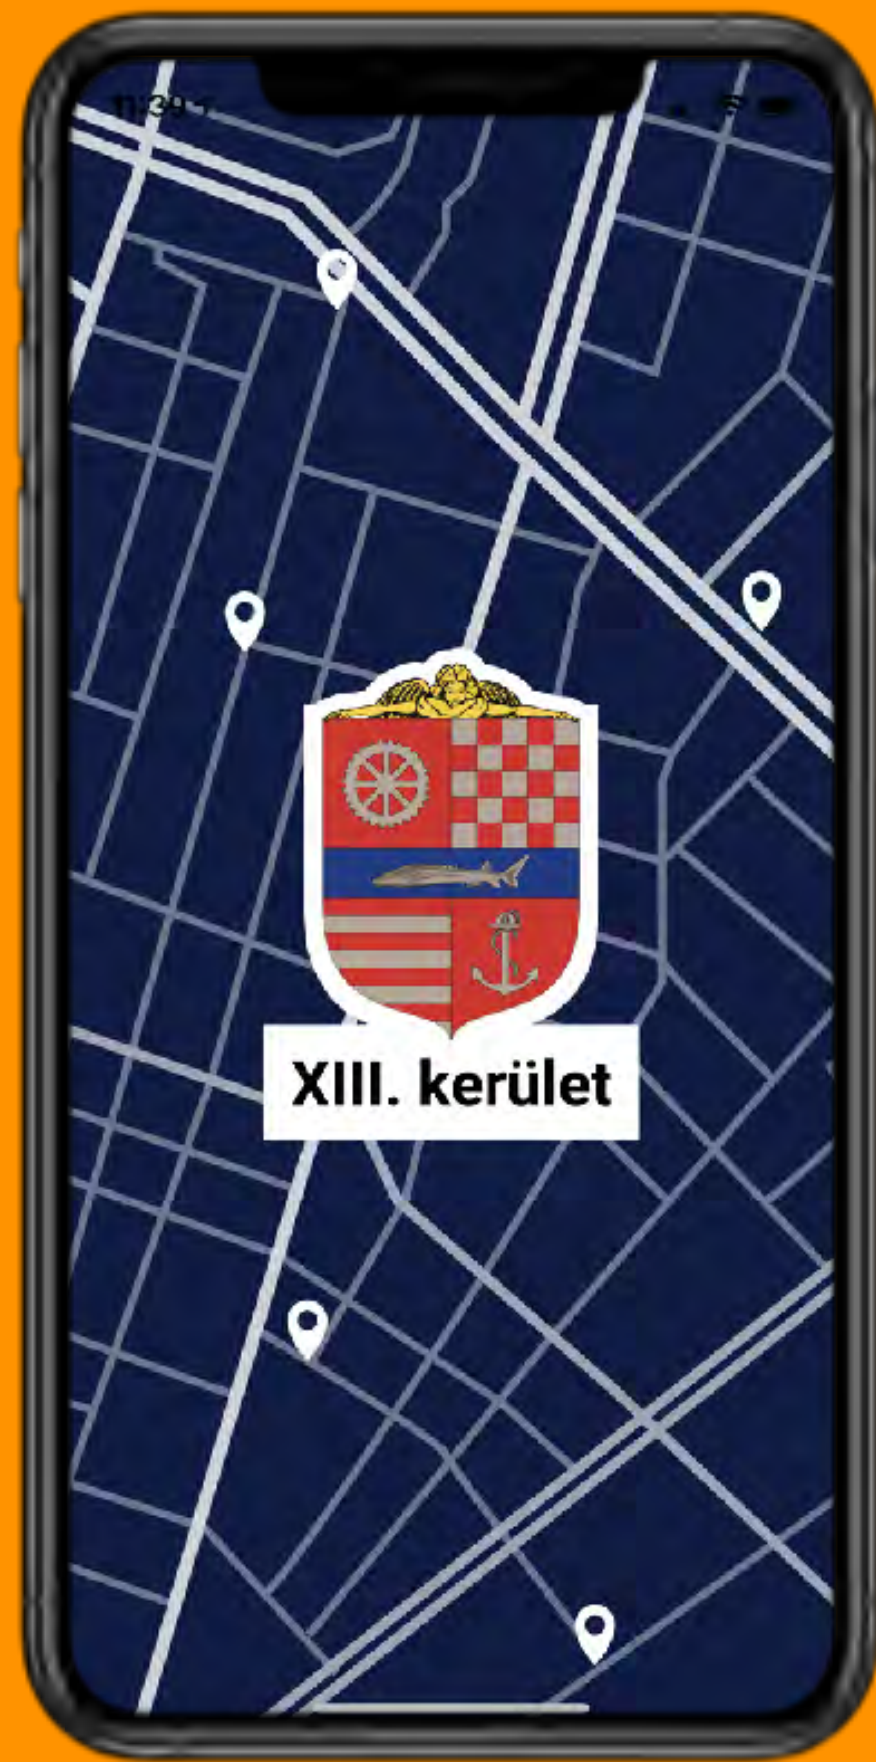

You can create and administrate your own content without having to use our support.

Support

Of course, we are always there if you need help and in the meantime we are constantly improving and adding functions.

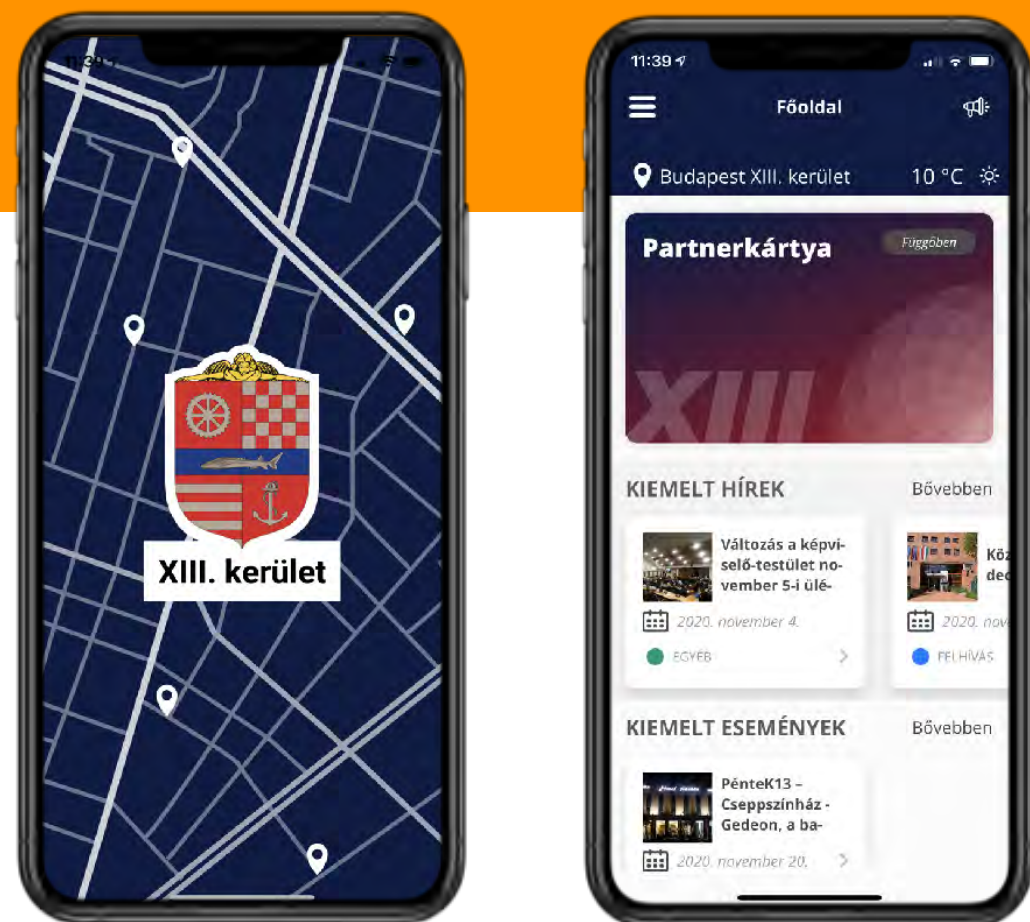

The application.
